

# Accelerate Your Fleet's Transition to EVs

No Additional RFP Required

## Electrification Made Simple Through Hawai'i's Statewide Contract

The State of Hawai'i has a statewide contract (RFP-20-001-HWYS) to support the transition to electric vehicles (EVs) and charging infrastructure — **available to state and county agencies.**

Awarded to **Sustainability Partners (SP)**, this contract enables agencies to electrify their fleets with **no upfront capital**, no long-term debt, and **no new solicitation process**. Vehicles and infrastructure are delivered as a service, with simple monthly usage fees based on mileage, reducing both operational and maintenance costs.

### What's included:

- ✓ **All vehicle types** — delivering fully outfitted sedans, trucks, SUVs, buses, shuttles, refuse vehicles, street sweepers, and plug-in hybrids
- ✓ **Broad selection of makes and models**
- ✓ **Charging infrastructure** — included and tailored to your fleet needs
- ✓ **Turnkey solution** — from planning to procurement, delivery, and ongoing maintenance
- ✓ **Compliant & cost-effective** — pre-approved contract eliminates the need for new RFPs

### Why This Matters:

-  Eliminate upfront vehicle and charger costs
-  Start reducing fleet maintenance and emissions immediately
-  Transition to a fleet your staff can rely on
-  Accelerate progress toward Hawai'i's clean energy goals

## LOW MONTHLY PAYMENTS

Electric sedans, light-duty trucks, and SUVs incur a low monthly usage fee that typically results in a cost of ~\$500 to \$1500/month.
